ANNOUNCEMENT
A Request for Pilot Project Proposals from IUSCCC trainees (graduate students, post-docs, residents, and clinical fellows)

The IU Simon Comprehensive Cancer Center requests applications from trainees for pilot funding to support innovative research focused on cancer. The primary purpose of this funding opportunity is to provide training on proposal writing, grant review process, and, if funded, how to manage funds. Proposals may span cancer biology, early drug development, including target identification, new model systems development and all aspects of cancer prevention and control including population science and symptom management to name a few. Proposals that provide training in new technologies are strongly encouraged. This mechanism may not be used to support clinical trials. Funding is scheduled to begin in April 2024.

Funding will be allocated from the IUSCCC and will be up to $10,000. Eligibility: Mentors must be an IUSCCC member (Research Program member, Unaligned member or Affiliate member); trainees do not need to be IUSCCC members at the time of application submission but must have applied for trainee membership by the award funding date. Awardees are not eligible to apply for pilot funding in back-to-back cycles (Only awardees who received funding in 2021 are eligible). A progress report on the previously funded project will be required as part of your application package and will be requested separately.

Those interested in applying must submit a Notification of Intent to Apply by January 31, 2024 by 11:59pm with the following information:

- Your name, a draft title for your proposal, the name of your mentor and 1-2 sentences describing the project. This information will be used to help identify appropriate reviewers.
- Please send this information in an email to Steven Verhagen at stverhag@iupui.edu

Final applications are due by February 29, 2024. The deadline is firm, and no extension will be granted. The body of the proposal (Significance, Innovation and Approach) should not exceed three pages. Follow NIH guidelines and formatting. A budget should be included and is restricted for supplies and any IUSCCC core services. Budgets should be based on the experiments proposed in the application. It is expected that the proposed project and budget will be completed within 1 year (12 months).

Applications will be completed via WebCAMP. The application template is posted on the Indiana CTSI website. A link to use for the submission will be sent after an applicant’s Notice of Intent has been approved.

Required information for application package:
1. Abstract (NIH format; 30 lines)
2. Aims (1 page)
3. Significance
4. Innovation
5. Approach
6. Budget justification
7. NIH biosketch for all team members (trainee, mentor and any collaborators on the project)
8. A letter signed by the trainee and their mentor declaring that the proposal ideas and writing are trainee-driven, but the proposal received feedback from the mentor. Letter should include a mentoring plan to help the trainee to transition into an independent research career.
9. If you applied for funding through this mechanism in 2021 or 2022 but did NOT receiving funding, please include a 1-page response to the reviewer critiques. Your 1-page response to the previous critiques should be included at the beginning of the application package and does not count toward the three-page limit for the proposal.

An expert review committee comprising members of cancer center programs will review all proposals. Applicants are encouraged to attend review meeting to witness the review process. Final scoring and funding decision will be made in the absence of applicants. Both funded and unfunded applicants are encouraged to
meet one of the Associate Directors of the cancer center to obtain feedback on the application and the review process. Final funding decisions will be made based on the review evaluations and rankings.

If awarded pilot funding through this mechanism, awardees will then need to work with either Crystal Baker or Kaitlin Evans and use the ITRAC process to map the project. Awardees are required to report any publications and grants submitted and/or funded as a result of this pilot award to IUSCCC.
